```
[1]: a = 2  
     b = 3  
  
     a > b
```

[1]: False

```
[2]: a != b
```

[2]: True

```
[3]: a >= b
```

[3]: False

```
[4]: my_list = [1, 2, 3, 4]  
     5 not in my_list
```

[4]: True

```
[5]: 4 in my_list
```

[5]: True

```
[6]: "s" > "a" # Unicode comparison s == 73, a == 61
```

[6]: True

```
[7]: print(bool(0))
```

False

```
[10]: print(bool(20))
```

True

```
[11]: A = 15  
     if A == 10 or 20: # Careful, python interprets as (A == 10) or (20)
```

```
print("A is 10 or 20")
```

A is 10 or 20

```
[18]: A = 10  
      B = 15  
      if (A == 10) and (B == 15): # Yep  
          print("A is 10 or 20")
```

A is 10 or 20
