1 Code Handling

```
[7]: globalScope = "Global Scope"

def scope():
    global localScope
    localScope = "Local Scope"
    print(globalScope + " & " + localScope)
```

```
[8]: scope()
```

Global Scope & Local Scope

```
[9]: print(globalScope)
```

Global Scope

```
[10]: print(localScope)
```

Local Scope

```
[ ]: # Change scope on 'localScope' to be global
```

```
[11]: globalScope2 = "Global Scope"

def scope2():
    global globalScope2
    globalScope2 = globalScope2 + " Updated"
    print(globalScope2)
```

```
[12]: scope2()
```

Global Scope Updated

```
[ ]: # Change scope on 'globalScope2' to be changeable
```

```
[13]: print(__name__)
```
